PIPE APPLICATION

22m x 3m diameter rainwater attenuation tank

Newport businesses go green for the environment

European industrial battery manufacturer EnerSys looked to ASSET International Ltd to supply an attenuation tank as part of a refurbishment of its facilities.

The tank is to be used by EnerSys to control the rate at which rainwater is discharged off site helping to prevent flooding and erosion in the surrounding areas of Newport.

WEHOLITE has become popular with Newport businesses as an environmentally-friendly plastic alternative to the traditional concrete products.

Andy Williams, Project Manager at EnerSys said: "We required a system that would provide additional water storage for storm run-off in times of heavy rainfall, which was cost-effective and did not involve the same time consuming installation process as traditional concrete alternatives."

Shaun Kalies, Sales Manager at ASSET International Ltd said: "More and more Newport businesses are taking the responsibility of managing stormwater within the city to protect people, property and the environment by minimising the impact of flooding, erosion and environmental pollution."

"ASSET provided the perfect solution; a plastic alternative that only took one day to install. The design of the tank also means that stormwater entering the drains is of better quality than would otherwise be the case."

THE ESSENTIAL SOLUTION FOR PIPE USERS NATIONWIDE
